DETAILED ACTION

1. Claims 1-3 are pending.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. **Claims 1-3 are rejected under 35 U.S.C. 102(e) as being anticipated by Gilbert, et al. (US 7,165,177).**

As per claim 1:

Gilbert discloses a plurality of integrated circuits, each of the integrated circuits comprising a processor and non-volatile memory (**col.1, lines 13-14 and col.7, lines 41-53**), and including code for running identical software processes, wherein each of the integrated circuits also includes secret information used by the software process (**col.2, lines 4-10 and col.6, lines 11-14; secret information can broadly interpret as data that is protected and secure such that may involve authentication or verification process. Gilbert to a secret key or authentication data or certificate value (col.3,**

lines 1-28) which is referring to the claimed secret information.), the secret information in each chip being located in a different location in the memory relative to a plurality of the other chips. (col.6, lines 18-22 and col.7, lines 55-65)

As per claim 2: see col.6, lines 18-22 and col.7, lines 55-65; discussing a plurality of integrated circuits according to claim 1, wherein the code on each integrated circuit is such that the software process of each chip knows the location in memory via which the secret information is accessible.

As per claim 3: see col., lines ; discussing a method of manufacturing a plurality of the integrated circuits of claim 2, including the steps of:

manufacturing a plurality of physical integrated circuits; and **(col.5, lines 21-23)**
injecting, into the non-volatile memory of each of the integrated circuits:
code for running a software process; and secret information; **(col.4, lines 4-15**
and col.6, lines 24-26)

wherein the secret information is positioned in relatively different locations of the non-volatile memories and the code on each integrated circuit is such that the software process of each integrated circuit knows the location in memory via which the secret information is accessible on that integrated circuit. **(col.6, lines 18-22 and col.7, lines 55-65)**
